

“Level Green”

Experience sustainability up close and in a playful way

The following material was developed for a sustainable and holistic approach to visiting the "Level Green" exhibition in the Autostadt Wolfsburg. Since the Autostadt itself does not provide any educational material for visiting the Autostadt and in particular the exhibition, an exploration sheet, an escape game and a quiz game with a game board were developed to make the visit to the Autostadt both competence-oriented and exciting.

Teachers can provide their students with the exploration sheet or alternatively run the escape game to explore the exhibition in a targeted manner. The quiz game can be used in the classroom to follow up on and reflect on the day trip to Autostadt and the visit to the exhibition.

The exhibition “Level Green” covers the following topics

- Green energy,
- Sustainable mobility,
- Conservation of resources,
- Ecosystem and biodiversity,
- Climate change,
- Sustainable consumption,
- Visions of the future,
- Interactive games and simulations and
- Virtual Reality

and can be attended in conjunction with the learning situation “Developing a sustainability concept for the city”.

The material was created based on a visit to Autostadt Wolfsburg and with the support of MS Bing Copilot and MS Bing Designer.
